

Project Management

... delivering successful projects requires careful co-ordination of resources through appropriate project management techniques ...

Selecting the right project team for each project is crucial. By understanding the deep organisational and operational issues, as well as technical requirements we ensure that individual projects are effectively initiated, fully defined and efficiently managed.

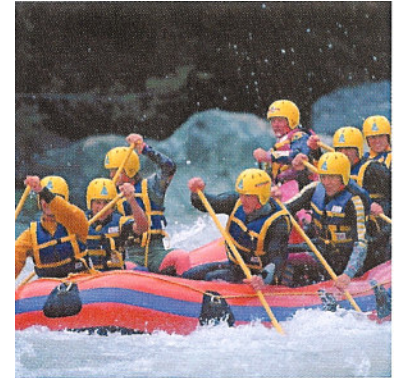

We recognise that each individual project requires a unique solution. By combining our past project experience with the management skills of our Team and Partners, we can deliver substantial value and contribute to our clients' business objectives.

Our capabilities can be applied to major hard asset or infrastructure projects, as well as change programmes and projects. We are experienced in a variety of project management roles, e.g. :

- ❑ New projects design and management
- ❑ Troubleshooting, audit and recovery strategies
- ❑ Sponsorship, organisational development and coaching
- ❑ Project systems, procedures and benefits realisation

We prefer to work alongside the client representatives to leverage their understanding to accelerate learning for all, whilst ensuring that skills transfer benefits the clients' wider organisation.

Our project management services provide real measurable value and deliver success through structured implementation and the identification and mitigation of risk.
